TECHNIQUES FOR DRIVING IN THE RAINY SEASON AND FLOOD AREA

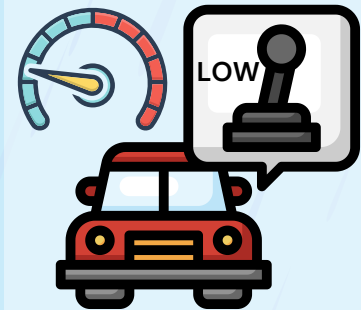

Have car maintenance regularly and check your car before leaving.

Turn on headlights or fog lamps in heavy rain. Do not turn on emergency lights.

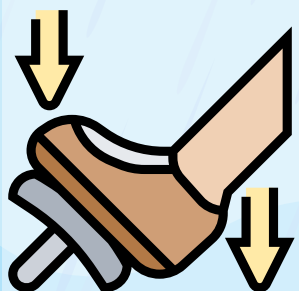

Turn off the air-conditioner when drive in flood to reduce the possibility of splashing water in the engine.

Observe and avoid the roadway that the water level is higher than the footpath and car door edge.

Drive slowly with steady speed and use a low gear (L or 1) and avoid sudden and unnecessary braking.

Do not restart the engine immediately if it is stopped in flood. It makes the engine and electrical system damage.

After driving through flood area, repeat your brakes or clutch to let the water out.

Check the parking area. Avoid parking in high-risk flood areas (basement car park, area lower than ground level) to prevent the heavy damage.

If an abnormality of the engine, electrical system, or brakes is found after driving through flood water, please get your car checked immediately.

Emergency case: Accident or Emergency breakdown
