## GPS service for 'Fleet Manager' Supporting vehicle management with enhanced safety

Our fleet management service is cloud-based, enabling you, as a fleet manager, to efficiently and reliably manage vehicles through a monitor.

### Tracking Vehicle Usage

#### Vehicle status monitoring

Theft

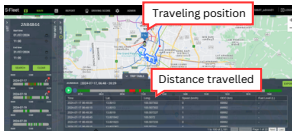

Operating Status

Personal use / staking

#### Driving condition / history

Display driving status and history on a map to quickly grasp vehicle location and distance.

#### Notify of suspicious movements

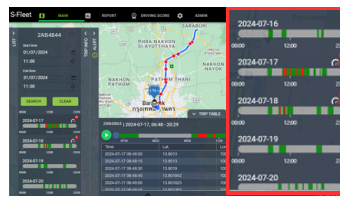

Notify you immediately of any suspicious vehicle movement outside of operating hours.

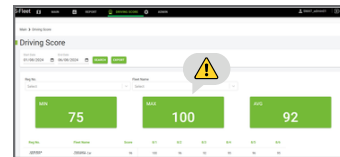

### Safe Driving Support / Driving Scoring

#### Driving situation

Display occurrences of sudden braking and sharp steering on a map to enable accurate understanding of driving conditions and sharing of dangerous spots.

#### Driving scoring

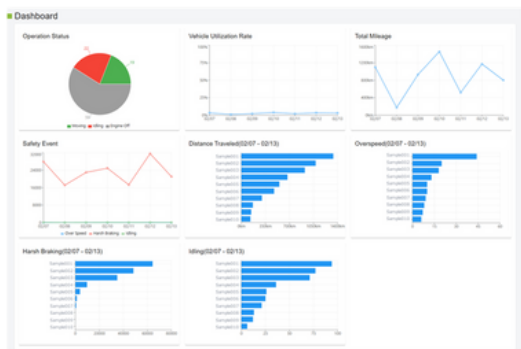

Additionally, scoring the safe driving status help us to provide guidance to vehicles with dangerous driving behavior.

### Dashboard Summary

#### Display data using various graphs

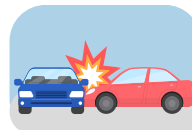

Monitor the current operational status of your vehicles. Also, can check the vehicle utilization rate, total mileage, and numbers of alerts throughout the previous 7 days in various graph formats, making it easier to understand the collected data.

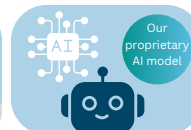

### Collision Detection

#### Accident detection information

Collision occurs

AI Analytics

Collision detection notification

AI analysis determines whether a collision has occurred based on the vehicle's acceleration data. If a collision is detected, a notification will be sent to inform you.
